

# This is information from Tsu City Hall

## 【Stop COVID-19 infection in the family!】

Even infected people without any symptoms can spread COVID-19, so the virus can be passed through conversations without knowing.

Here are some tips for preventing infection.

### Some tips for preventing infection

- Wash your hands as soon as possible when you come home in order to prevent spreading the virus into the house.

- When you come home, use sanitizer to clean items you often touch such as your cell phone.

- Cough etiquette should be observed in the home as well.

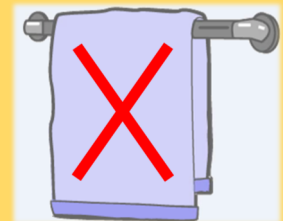

- Close the toilet lid before you flush.

- Don't forget to wash your hands or use hand sanitizer, especially before meals and cooking, and after using the toilet.

- Use smaller individual plates instead of big plates to avoid sharing things, as well as towels or cups.

It is a cold season but proper ventilations will help your health.

Please refer to the Tsu City website to get information regarding COVID-19.
